

GSE245601 -- real patient-matched acute 12h response (3 eligible patients)

ACUTE 12h ex vivo tamoxifen exposure, NOT chronic resistance. Each line = one patient's own tumour, Control -> Tamoxifen (real pairing, connecting lines appropriate here unlike GSE240112). KDM1A/TLK2 values computed from frozen raw counts using the same formula as the frozen USP34/VEZF1 values (see DATA_FOR_VISUALIZATION_AUDIT.md).
