

F2. Pathway-level convergence across transcriptomic contexts

* FDR<0.05 (gene-set enrichment within that dataset). "n/t" = pathway not testable in that dataset (gene-set size filter). GSE240112 is a recurrence-associated human-tumour comparison, not a resistance model -- shown in its own category, never grouped with GSE118713/GSE111151.
