

USP34

Primary sensitisation candidate

CRISPR effect_size = -1.391
CRISPR FDR = 0.0417

TAMR_vs_MCF7 (PRIMARY evidence)
log2FC = +0.590 FDR = 0.00731

TAMR_vs_FASR (secondary context)
log2FC = +0.020 FDR = 0.912

MCF7 baseline log2(TPM+1) = 5.109

USP34 combines a sensitising CRISPR knockout effect with significantly elevated expression in tamoxifen-resistant versus parental MCF7 cells.

Association and functional-screen evidence; not proof of a resistance mechanism or therapeutic efficacy.

actual GSE118713 replicate values (n=3/group)
